# We I.V.DO that™

## Infectious Disease—What's next?

### *Antibodies and associated antigens*

Today we are all too aware that infectious diseases can arise suddenly and unexpectedly from almost anywhere. Viral, bacterial, fungal and parasitic pathogens may be transmitted by person-to-person contact, vectors such as mosquitos, and through interaction with animals. Identification of the pathogen can help to determine the best treatment options and reduce unnecessary antibiotic usage. Medix Biochemica is committed to enabling our customers to support the diagnostic testing needs of the next waves—whatever the origin.

**FIA test format: anti-Influenza B antibody [#9901 (Blue) or #HM424 (Red)] coated on anti-mouse IgG plate. Detection with Europium (Eu)-labelled antigen [recombinant Influenza B NP (#610051, Left) or inactivated Influenza B virus, Right].**

**Medix Biochemica** provides a wide selection of high-quality antibodies, recombinant antigens and molecular diagnostic reagents to support infectious disease testing.

#### Most Popular Analytes

- Candida albicans
- Chikungunya
- Chlamydia
- Clostridium difficile
- Coronavirus
- Cytomegalovirus (CMV)
- Epstein-Barr Virus (EBV)
- Helicobacter pylori
- Hepatitis (HBV & HCV)
- Herpes Simplex Virus
- Influenza A / B
- Nipah
- Norovirus
- Malaria
- RSV
- Rotavirus
- Streptococcus group A
- Treponema pallidum
- Varicella-Zoster Virus
- Zika Virus
